LONDON MATHEMATICAL SOCIETY MONOGRAPHS

# Log-Gases and Random Matrices

## London Mathematical Society Monographs

Editors: Martin Bridson, Terry Lyons, and Peter Sarnak

Editorial Advisers: Mikhail Gromov, Jean-Francois Le Gall, and Richard Taylor

The London Mathematical Society Monographs Series was established in 1968. Since that time it has published outstanding volumes that have been critically acclaimed by the mathematics community. The aim of this series is to publish authoritative accounts of current research in mathematics and high-quality expository works bringing the reader to the frontiers of research. Of particular interest are topics that have developed rapidly in the last ten years but that have reached a certain level of maturity. Clarity of exposition is important and each book should be accessible to those commencing work in its field. The original series was founded in 1968 by the Society and Academic Press; the second series was launched by the Society and Oxford University Press in 1983. In January 2003, the Society and Princeton University Press united to expand the number of books published annually and to make the series more international in scope.

LMS-34. Log-Gases and Random Matrices, by P. J. Forrester

LMS-33. Prime-Detecting Sieves, by Glyn Harman

LMS-32. The Geometry and Topology of Coxeter Groups, by Michael W. Davis

LMS-31. Analysis of Heat Equations on Domains, by El Maati Ouhabaz
